Global Ordnance and ARQUIMEA Sign Teaming Agreement to Expand Drone and Counter-Drone Capabilities for U.S. Forces

With capacity to produce up to 1,000 drones a month, ARQUIMEA broadens reach to U.S. defense customers through Global Ordnance

SARASOTA, Fla. – (Nov. 12, 2026) – Global Ordnance Holdings, a U.S.-owned defense company, and ARQUIMEA USA, the U.S. subsidiary of global technology company ARQUIMEA, have signed a teaming agreement to expand the unmanned and counter-unmanned systems available to U.S. and allied forces. Under the agreement, ARQUIMEA USA will manufacture the systems, and Global Ordnance Holdings will serve as the prime contractor to the U.S. Department of War, leading contracting, program management and delivery.

“Drones have fundamentally changed modern warfare, and demand for affordable autonomous systems is outpacing what any single supplier can deliver,” said Marc Morales, CEO, Global Ordnance. “ARQUIMEA’s field-ready systems and production capacity expand what we can deliver to U.S. forces and our allies, in the air and at sea.”

ARQUIMEA’s systems join Global Ordnance’s existing UAS and C-UAS offerings, adding new options for aerial and maritime defense.

ARQUIMEA’s unmanned systems portfolio brings together field-ready aerial capabilities and technologies for maritime operations. Its Q-SLAM family of intelligent loitering munition systems supports reconnaissance, target acquisition and precision-strike missions, complemented by C-UAS solutions based on autonomous interceptors and portable radio-frequency equipment. At sea, the WISE family and KRONOS family are ARQUIMEA's autonomous underwater vehicle and unmanned surface vehicle solutions for naval operations.

“For more than 20 years, ARQUIMEA has developed capabilities for defense customers internationally. We’re ready to bring those solutions to American forces as well,” said Fermin Olivan, CEO, ARQUIMEA USA. “Global Ordnance knows how to deliver for American warfighters, and together, we can more efficiently provide our AI-enabled systems to the units that need them.”

ARQUIMEA recently expanded production capacity, adding more than 129,000 square feet of new manufacturing space dedicated to high-volume production of its proven unmanned and C-UAS solutions. The teaming agreement will leverage that increase in capacity and further allow the companies to meet increased demand from the U.S. military.

About Global Ordnance Holdings
Global Ordnance Holdings is a U.S.-owned defense company founded in 2013. Its businesses include Global Military Products (defense programs and international sales), Global Ordnance, LLC (commercial sales), Global Ordnance Trading and Mountain Horse Solutions (unmanned and counter-unmanned systems), with international entities in the United Kingdom and Europe. The company supplies ammunition, energetics and unmanned systems to the U.S. government and allied nations. Learn more at global-ordnance.com.

About ARQUIMEA
ARQUIMEA is a Spanish technology company operating globally in the aerospace, defense, security and NewTech sectors. We work with international agencies, armed forces and leading companies, delivering innovative and reliable solutions. Our in-house research and development center advances technologies such as artificial intelligence, robotics and quantum technology. We turn this expertise into advanced products and systems, designed and manufactured to meet the demands of our customers and the markets we serve.
